

## WHY CHOOSE HOME HEALTHCARE (HHC)?

An excellent, cost-effective alternative to hospital care is home health care services. In many cases, HHC services allow patients to be discharged earlier from a hospital, reducing hospital admissions, and help with a faster recovery. We understand people are happier at home where they can receive more care and attention from family, friends and home health care professionals.

Our team of doctors, nurses, home health aides, medical social workers and therapists coordinate care based on the individual's needs and the physician recommendations.

In many cases a long hospital stay isn't necessary to ensure recovery from an illness. At the same time, the idea of taking responsibility for patient care at home can be overwhelming. This is where we can help. Patients do better in the comfort of their home environment which is more conducive to healing and is almost always the preference of the patient.
